TO **SIMPLIFY**  
ENZYME USAGE

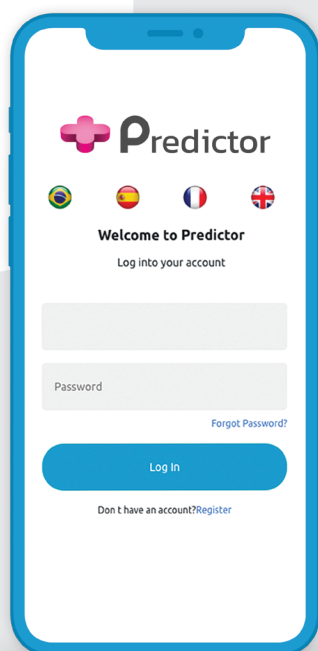

# EXTRACT THE MAXIMUM VALUE FROM YOUR FEED WITH A TAILORED RECOMMENDATION POWERED BY **PREDICTOR**

Precise enzyme usage requires knowing the nutritional and anti-nutritional characteristics of your feed formula. Predictor provides this information and takes it into account to customize your enzyme matrix.

Based on field experience and scientific data, the technical teams of Adisseo have built these accurate algorithms to predict the potential uplifts created by feedase in a diet.

## WHAT IS NEW IN THE PREDICTOR PLATFORM?

### NEW DESIGN FOR AN EASIER USE

The new interface was designed to be intuitive and user-friendly.

### INCREASE YOUR ACCURACY

PNE, Adisseo's NIRS allows to really customize your values, included arabinoxylan content - NSPase substrate.

### COMPARE YOUR FEED PROGRAMS

This new functionality allows comparing the enzymatic potential under different feed programs or comparing different enzyme potential with the same formula.

## HOW DOES PREDICTOR WORK?

1

Define your settings  
(units, species, raw material matrix, Rovabio® products).

2

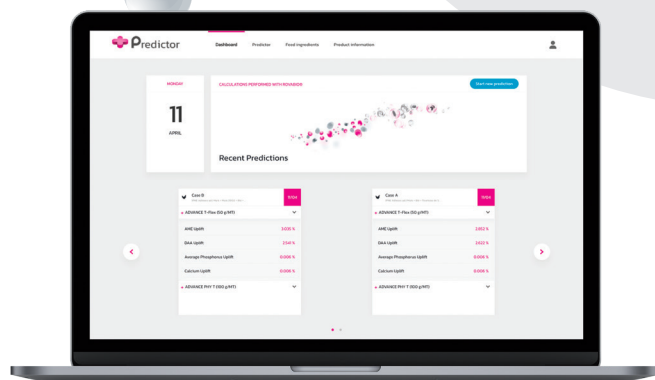

Enter your feed programs.

3

Nutritional and anti-nutritional feed values are calculated.

4

A tailored nutritional matrix based on your feed program is calculated.

## WHAT ARE THE KEYS FEATURE OF PREDICTOR?

### R & D and field trials to establish the model

The mathematical model is based on in vivo performance and digestibility studies performed all around the world and under different raw material conditions.

**5 raw material tables are available in Predictor,** to cover the diversity of formulation practices in the world.

**16 raw materials integrated in Predictor** customizable with your own values.

### Sustainability

Predictor is also a reliable tool to estimate your savings on raw material utilization. Using less feed by limiting the amount of undigestible nutrients is a good way to improve the global livestock sustainability.
