

# REDUCE EXPENSIVE DISEASE OUTBREAKS

Sustain animal  
resilience

Close the door to  
mycotoxins

Alterion®

- Alterion® is a complete probiotic solution for poultry, specifically designed to deliver consistent performance
- Alterion® helps animals, which face many external challenges, to maintain their physiological status in homeostasis and to ensure their resilience through its action on the three lines of defence:
  - by ensuring a resilient microbiome
  - by strengthening the gut barrier function and preserving gut integrity
  - by maintaining a reactive immune system
- Adisseo benefits from a wide range of solutions to promote health by nutrition including SCFAs and MCFAs to adapt to different rearing and nutrition strategies

Toxy-Nil® Plus

Unike® Plus

- The presence of mycotoxins in feed decreases resistance to infectious diseases, reactivates chronic infections and decreases vaccine efficacy
- Toxy-Nil Plus (broilers and layers) and Unike Plus (breeders) protect animals against a broad spectrum of mycotoxins
